Sunrise

In the morning the sun rises in the east. Your shadow stretches long, away from the sun.

Climbing high

As the sun climbs higher in the sky, your shadow gets shorter.

Midday

Around the middle of the day the sun is at its highest, and shadows are at their shortest.

Afternoon

In the afternoon the sun sinks toward the west, and your shadow grows long again, pointing east.

✂ cut here

Sun and Shadows

Watch your shadow change all day

Name: _____

Golden hour

Just after sunrise and just before sunset, the light looks warm, golden and soft. Photographers love it!

Stay safe

Never look straight at the sun, even with sunglasses. Draw your shadow in the morning, at noon and in the evening!

The end!

Grown-ups: keep the learning going with **Asterfold**, free on iPhone.
