Thunder and lightning

Lightning is a giant spark.
Thunder is the sound it makes.
When thunder roars, go indoors!

Rain

When the tiny drops bump together, they grow. When they get too heavy, they fall as rain.

Clouds

Clouds are made of millions of tiny drops of water or bits of ice, floating in the air.

Sun

The sun warms the land and the air. Without it, Earth would be frozen and dark.

✂ cut here

Snow

When it is cold enough, water in clouds freezes into snowflakes. Snowflakes have six sides.

Wind and rainbows

Wind is moving air. A rainbow appears when sunlight shines through raindrops, with the sun behind you.

The end!
